

ABSTRACT OF THE DISCLOSURE

A method for servicing companies associated with a spray device operating under guidelines of a regulatory body includes capturing in vitro actuation data associated with operation of the spray device and distributing the data to a company associated with an aspect of the spray device. The company may use the data for testing the spray device to ensure continued compliance with prior approval of the spray device by the regulatory body. The method may also include converting the data to parameters and distributing the parameters. Capturing the in vitro actuation data may include sorting the data based on in vitro age groups. Distributing the data may include providing the data in a format executable by an automated actuation system. The company receiving the data may be a drug development company, spray device manufacturer, or testing service. The regulatory body may be the Food and Drug Administration (FDA).
